```
[]: # One of the changes I made was that I added another layer in the network
# that takes the output from the second convolutional layer, applies ReLU_
activation,
# and passes it through a 2x2 AvgPool layer to capture more relationships.
# I also reduced the learning rate of the optimizer to half (0.0005) which
# which allowed the optimizer to take smaller steps towards the minimum of
# the loss function which might allow for a better chance of finding the global_
min of loss.
```
